

PES SOUTHERN LIMITED

Safe, Proven and Protected

Upgraded Model
NEW
For 2010!

The patented* centering pin prevents the barrel tumbler pin from making contact with the "bumping" key.

Centering Pin

Extra Patent Protection

The PES System is protected by the following patents until 2022:

- *Europe Publication no. EP1362153*
- *International patents registered under WO 03/004806*
- *Design Protection until 2030*

Extra Protection against picking

Protection against picking is provided by an overlapping key profile and special pins.

Extra Protection against drilling

Drill protection is provided by additional hardened steel safety elements.

Extra Protection against the "Bumping Method"

A patented* system by PES using a "centering pin" has been proven to hinder opening cylinders by the "blmping" method. Even expert lock pickers have not been able to "bump" open a PES cylinder (shown live on European TV, May 2005)

Extra Protection against illegal duplicate keys

The new PES cylinder system meets the requirements of EN 1303:2005 for key related security to grade 6 and for attack resistance to grade 2 for six pin cylinders. PES has legal and physical copy protection against unauthorised duplication provided by the new undercut branched groove in the key/cylinder profile and the active pin in the cylinder.

Extra safety for you

Duplicate keys may only be produced by authorised PES dealers.

SECURITY INSTALLERS SECURITY ENGINEERS LOCKSMITHS

Locks

Whether its a standard lock for a shed, a mortice for your front door or a full blown integrated security master key system. We have been providing and installing all types of locks and keys for all types of timber, metal, glass, aluminium and even plastic doors and windows. In fact if you need it locking we can do it.

Registered Key Systems

1. Imagine never being locked out of your managed premises again.
2. Imagine never having to replace the locks again due to keys having worn out.
3. Imagine losing your keys and having a replacement within 4 hours.
4. Imagine having as many locks as you require working to the same key.
5. Imagine being able to restrict the amount of keys your tenants can obtain
6. Imagine not having to change the locks when a change of tenants takes place.
7. Imagine a system that has limitless formula and applications.
8. And finally imagine picking up the phone and ordering a registered key by number and having it in your hand whenever you want it. No registration cards.
